## Migrate from egg-\* to libdazzle.

Since libdazzle has been built, egg-\*.c[h] files are no need.

memnoth commented 6 days ago • edited ▾

Collaborator + 😊 ...

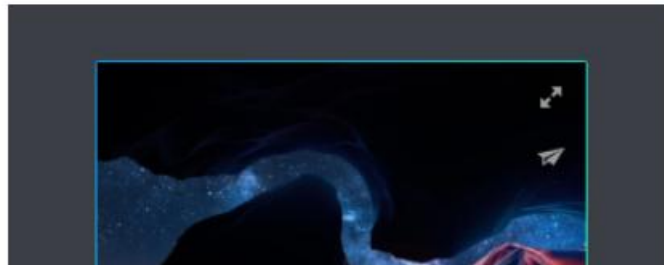

I really wonder libunity is seriously necessary and what it is exactly doing on fondo.  
There might be somewhere(linux distros) to require this, but in flatpak too...?  
What do you think about it? @calo001 @bllelmoussaoui

calo001 commented 6 days ago

Collaborator + 😊 ...

@memnoth I use libunity because elementary OS (my main distro target) needs it in Plank to show the download progress 👍
